Excerpt: . . . absolute germinal resisting power that all or practically all of the offspring are defective in greater or less degree and in reference to some one or more characters. Stockards F2 and Fs results indicate that though the untreated Fi animals from alcoholists may appear normal, they really are somewhat defective. f. If, on the other hand, the dosage, though absolutely the same, be relatively lower in proportion to the mean absolute resisting power of the germ cells it would be expected that all three germ cell classes (a), (6) and (c) would be represented. The zygotes actually formed would be chiefly produced by (c) germ cells, and to a much smaller extent by (6) cells. Under these circumstances it would necessarily follow that a random sample of the zygotes produced after the action of the deleterious agent would, on the average, be superior in...
