To the dynamics of even a single molecule, the contestation and constraint of at least two opposite resisting agencies are indispensable: and in the various play of matter, other such agencies are no less clearly manifested. Nor is the certainty of multiplicity, in the slightest degree impaired by our admitted ignorance as to the final number of primeval forces. It may be that chemical affinity, and magnetism, are like heat, and electricity, merely derivative forms of energy; but at least this has not as yet been satisfactorily made out. The craving of the intellect for unity must therefore pursue its quest beyond and above the material empire of the physical forces. It is not a little remarkable that a tendency seems lately to have arisen to assign electricity to the station of a primitive force; and several physicists have almost simultaneously maintained its indestructibility and...
